Dan Graney, who is managing a project in Lehigh's Masters in Financial Engineering is looking for some coding help:

"We need someone who is able to implement a CSV into javascript code to display an index on our website. Everyday a new CSV is created with an additional value, this CSV needs to be displayed in a graph or chart in the HTML code using javascript. Because I am not experienced in Java or Javascript I am having some trouble completing this task"

If you have the skill set to help, reach out to Dan at [djg224@lehigh.edu](mailto:djg224@lehigh.edu)
